

WHAT'S NEW

GREEN DESIGN INDOOR PLANT HIRE

Green Walls and **New Web Site**

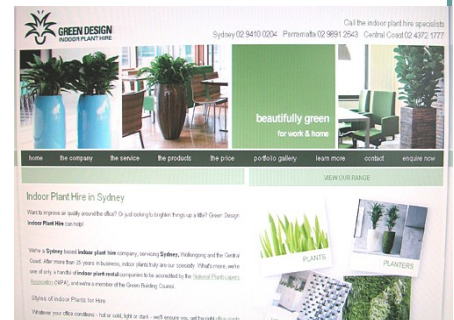

In their July 29th Technical Clarification The Green Building Council set down the rules for incorporating green walls in their Green Star rating system.

1. it can be done on the basis of net soil surface area, and
2. The total greenery in the project should be equivalently distributed across the NLA.

The second requirement obviously places some restrictions on the contribution a green wall can make towards the Green Star points for indoor plants.

Ring Rudy or Mark at Green Design for more information on this.

Green Design work closely with the Greenwall Company and together are in the process of developing a small modular green wall that can be wheeled in and out of offices. More on this in our next news letter. This would help in distributing the green wall across the NLA.

We have created a **new modern web site** with galleries and a lot of new planters. The address is

www.greendesign.com.au

Some images from our web site are reproduced in the middle row

GREEN STAR and SUSTAINABILITY

Green Design has a full range of sustainable planters.

We have an Accredited Green Star Professional on our staff

We have experience with Green Star compliance documentation.

We specialize in submitting proposals within your design and Green Star point requirements.
